Adobe Photoshop Elements is an easy-to-use, affordable alternative to Photoshop. Similar to Adobe Photoshop, it offers layer-based editing, adjustment tools, and advanced editing capabilities. It also supports the popular file formats for digital photography and offers a series of guided tutorials to teach the user the basics of editing, retouching, compositing, photo effects, and Photoshop. [Also See: The Top 5 Photo Editing Software] What is Photoshop? This is a raster graphics editor used for creating and editing images. It is used by individuals, small businesses, larger businesses, graphic designers, and everyone in between. It is capable of a great many things: Photo restoration, image retouching, digital art, more, etc. Photoshop became a platform for creativity when it was first created in 1987 by John Knoll and members of the Macintosh team. Adobe acquired a Macintosh operation out of the University of Utah and added it to the Photoshop team. Then, they were able to pull the product out from a technical dark age into the widespread world of digital photography that is today. How Does Photoshop Work? Photoshop is a raster editor, and this means that the graphics you create and edit in this program are pixel-based. In other words, you can actually create "pixel images" with this program. The graphics you create appear in a digital file that uses the dot matrix of pixels to create the image. The pixels are then laid out in a raster format that represents the entire image. The process of creating the image is basic and involves adding pixels to an empty image to create the different images and layers that we see on a computer screen. Layers in Photoshop can have a many different properties such as opacity, color, blur, and effects. You can add images and other layers in Photoshop using layers. Once the image is created, you can rearrange and resize the image as well as make copies of it using features that Photoshop has to offer. You can also make special effects and paste the image into other media, such as a PowerPoint presentation. Photoshop allows you to work with and edit a single image as well as a group of images. You can make modifications in one image and then copy them to the rest of the image. You can also make modifications to a group of images and make them appear as a single image. You can easily edit the individual images and make them appear as a single image or group

You can use Photoshop Elements to edit images, create new images, and even web graphics. In this article, I'll show you step-by-step how to edit images and create new images using Photoshop Elements and I'll cover both Lightroom and Photoshop Elements version 8. What is Photoshop Elements? With Photoshop Elements, you can edit, retouch and publish images. In other words, you can edit images to make them look better. Photoshop Elements is a good, affordable alternative to traditional versions of Photoshop for photographers, designers, illustrators, social media creators, and hobbyists. It has many features that are similar to Photoshop. Like Photoshop, you can select layers, crop areas of the image and set a new background using the Background Layer option, you can move and resize elements, add 3D elements, and all of the PSD filters. Unlike Photoshop, it has fewer features. It is a one-stop graphics editor. You just need to download and install it. Why Photoshop Elements 8 is better than Photoshop? Last time we discussed Photoshop Elements, we mentioned that it doesn't have all of Photoshop features. The reason is that Photoshop Elements 8 was built to look good and be easy to use for photographers, graphic designers, illustrators, web designers, meme-makers and other people who edit images. For most of Photoshop users, there are many basic features they need to work with images. The price of Photoshop elements is also much cheaper compared to Photoshop. It has some limitations compared to Photoshop. Let's look at the differences: Although it has a similar user interface, you need to learn how to edit the editor in Photoshop Elements. It isn't intuitive. It has fewer features compared to Photoshop. It's limited to 8-bit/grayscale images, it's impossible to convert RGB images using the editor. You can't use 3D options. It's not a professional app. So, if you're looking for a good, professional image editing app for photography, use Photoshop. It has far more features compared to Photoshop Elements 8. Just some of the features are: Text, typography, An unlimited number of layers. Vector and raster tools. Automatic image correction features. Almost unlimited transformations and movements. Advanced content-aware fill, crop, content-aware auto-mer 388ed7b0c7

Photo : AP A driver was sentenced to three days in jail yesterday after he violated the terms of his release in October 2017 by vaping inside his car. But this isn't an isolated incident: drivers over the age of 21 have been caught vaping in their cars since 2017. Announced by the Los Angeles City Attorney's office in February 2017, the ban is meant to prevent people from vaping in their car and consequently driving, a concern that has been raised by two bills—HR 5084 and SB 975—to the Capitol this year. In October 2017, however, the ban didn't go into effect. The policy only goes into effect when it is approved and implemented by the governor. In October, one day before the ban was supposed to start, the governor vetoed the bill that would have allowed Los Angeles to begin enforcing the ban. Now, almost a year later, drivers have broken the new rule and it doesn't look like it's going to be repealed any time soon. Los Angeles is home to more than 3.5 million people, so it's somewhat understandable that the city could technically put a cap on the number of people who vape, given that vaping isn't necessarily a consistent use, so the city could prevent it from becoming a widespread activity. But the ban's inaction now is not just a driver ban (like the one put into place by California in 2006, which was followed by Washington, Oregon, and Colorado in 2010). The city has also banned people from vaping while driving even though smoking cigarettes is legal. In fact, two drivers in L.A. have already been sentenced to jail for vaping in their car because of this law. One was given three days and the other was given 15 days. A third man was charged with an "infraction" in May 2018, but no punishment was offered. All three cases were reported on the C.A.D.L.A.'s new anti-smoking website. "Our hope is that our actions will send the message that the operators of motor vehicles are not free to use their vehicle to indulge in an activity that could impact others," said City Attorney Mike Feuer in a statement. In the meantime, the L.A. City Council approved a symbolic measure this year that would ban smoking and vaping in all motor vehicles..W

Climate change threatens homeland security I don't know if we have actually been warned, or if our nation's defense and security systems have been taken by surprise. But I do believe we are rapidly approaching a point of no return. A large earthquake, flood, or other disaster is just a matter of time. Soon enough, millions of Americans will be without food, clean water, or functioning electricity. The streets will be infested with looters. The rest of the nation will be a frightened, co-opted zone where the law of the gun and the wildness of the rabid dog rule. Indeed, the rest of the world has already experienced this frightening scenario. As a world leader, we are most assuredly facing a crisis of not only our own making, but potentially life-threatening. We stand poised to become the first generation not to leave this Earth better than we found it, and that bodes ill for the future. We could have learned this lesson, and been preparing for years, by not relying so heavily on fossil fuels and on nuclear power as sources of energy. Yes, we have to continue to create and use cleaner, alternative energy sources, but let's not mistake them for a silver bullet that will save us, or mistake them for even a portion of the cure. The future is going to be dramatic and heartbreaking, unless we act quickly. We must prioritize responding to these changes. We must invest in research and development. We must continue to improve our education system so that we are not simply unprepared for life after fossil fuels, but we are also preparing ourselves to help prepare our children, and our children's children. We must continue to develop and improve alternative energy technologies. In the absence of a single, unified response to this impending crisis, we are witnessing a fragmenting of our society. The rest of the world understands that we have to address climate change. But so far, most of us have been lucky enough to forget that when we were too busy handing out tax cuts to the wealthiest Americans. The president's recently announced approval of the Keystone XL pipeline will likely heighten that divide. Oil and natural gas is still the most plentiful and affordable source of energy. And more than 40 percent of America's energy comes from fossil fuels. In fact, they represent the cheapest and most abundant source of energy that we have available to us. This is not necessarily a bad thing.
